

# XMWT-1

Max. readrange  
up to 50 mm.

## Watch Tag

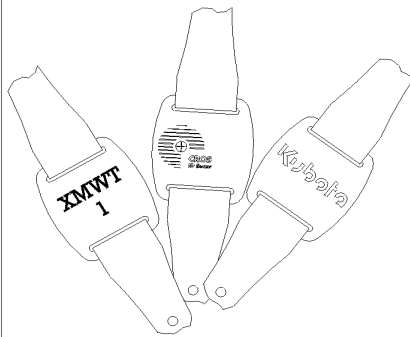

The XMWT-1 is a proximity watch tag based on passive RFID technology. Advanced 125 kHz RF techniques are used.

When the XMWT-1 is held within read range of a Cross Point proximity reader the tag identifies itself by transmitting its unique precoded ID number. This technique ensures ease of use, high reliability and vandal proof operation.

The XMWT-1 watch tag is easy in use since you can carry it as a watch.

The tag part is made of glassfibre reinforced epoxy and the wristlet is made of twisted perlon and thus very durable.

As the top surface can be provided with a compagny logo the bottum surface can be laser engraved with a 9 digit cone.

## Features:

-Easy to carry
